

ELITERY × AWS

AWS CendekiAwan 2.0

Showcase Prep

PARTICIPANT WORKSHOP

Demo guide + the questions you must be ready to answer.

Read this together as a team. Practise at least twice before the day.

Multimedia University (MMU) · 24 June 2026 · Faculty of AI & Engineering

THE RUN OF SHOW

What Happens on the Day

YOUR STAGE SLOT

~10 minutes on stage

No judging, scoring, or formal Q&A.

FIVE SHOWCASE CATEGORIES

- GovTech & Social Impact
- Smart Education
- Financial Inclusion & SME
- Digital Health
- Sustainable Environment & Climate

The 7-Minute Demo Structure

Five segments. Rehearse the hand-offs between speakers as carefully as the content.

0:00–1:00

Problem Statement

Named persona · specific problem · why it matters

1:00–2:00

Solution Overview

What the app does · WHY it needs AI, not a form or database

2:00–5:00

Live Demo

Open the deployed AWS app · 2–3 real inputs · meaningful outputs

5:00–6:00

Real-World Impact

Who benefits · how it scales · one real Malaysian organisation

6:00–7:00

Closing & Readiness

End on impact · your strongest line on why this matters

01

SEGMENT 1 · 0:00 – 1:00

Problem Statement

Real and specific problem not generic

A question to be ready for	✓ Strong answer	✗ Weak answer
"Who EXACTLY has this problem? Not generic — give me a name."	One concrete persona: name, age, job, and the specific situation they are in.	<i>'Everyone', 'students', 'the general public'.</i>
"Before your app, how did people solve this problem?"	Name the existing solution and the gap you fill. Show you actually researched it.	<i>'There was no solution before.'</i>
"What's the evidence? Data, or did you talk to real users?"	One statistic, one real story, or one direct user conversation.	<i>'We feel...' / 'We believe...' with no evidence.</i>

02

SEGMENT 2 · 1:00 – 2:00

Solution Overview

Solution that answer the problem

THE ONE YOU MUST BE ABLE TO ANSWER

"Why does this need AI? Why not just a form or a search engine?"

Say: Name specific AI capabilities — natural-language understanding, contextual responses, processing unstructured input — and tie each one to your user's problem. Avoid: 'AI is powerful / the future / more modern'.

A question to be ready for	✓ Strong answer	✗ Weak answer
"What makes your app different from other solutions?"	Local context (BM / dialect), Malaysian systems integration, domain-specific prompts, UX built for your user.	<i>'Other solutions need a subscription.'</i>
"What AWS services does it use? Walk me through the architecture."	User → Lambda → Bedrock API (name the model) → response. Every member must know this.	<i>Freezing, or pointing at each other.</i>

03

SEGMENT 3 · 2:00 – 5:00

Live Demo

Encourage Audiences to try the App with barcode or short url

A question to be ready for	✓ Strong answer	✗ Weak answer
[Someone in the audience tries an input you did not prepare for]	Practise 10+ unusual inputs beforehand. If output is off, acknowledge it — it shows you know the limits.	<i>Freezing. Saying 'please don't do that'.</i>
"This output looks wrong. How do you know it isn't hallucinating?"	Explain your prompt engineering, the constraints you set, and how you validated outputs in dev.	<i>'AI is always right.' / 'We trust Bedrock.'</i>
"What if I type something harmful or offensive?"	Show it live if you can, then explain the guardrails you built in.	<i>Skipping or dodging — be ready, this one comes up.</i>
"Which Bedrock model are you using, and why?"	Name the model (Claude / Titan / Llama, etc.) plus a technical reason for the choice.	<i>'The one from the tutorial.'</i>

04

SEGMENT 4 · 5:00 – 6:00

Real-World Impact

Implementation Plan and Result

A question to be ready for	✓ Strong answer	✗ Weak answer
"Name one real Malaysian org that would pilot this. Who do you call?"	One real name: a school, clinic, NGO, MCMC, MDEC, or GLC. More specific = stronger.	<i>'Maybe someone would be interested.'</i>
"If 100,000 users used this tomorrow, what breaks first?"	Be honest: Lambda concurrency, Bedrock rate limits, or cost spikes. Self-awareness impresses any audience.	<i>'Nothing — AWS is scalable.'</i>
"How much does it cost per user, per month?"	Use the AWS Pricing Calculator beforehand. A rough estimate is fine.	<i>'We haven't calculated.' / 'It's free on sandbox.'</i>
"Who gets left out? Who can't access your app?"	Acknowledge gaps (smartphone, internet, digital literacy) and your plan to address them.	<i>'Our app is for everyone.'</i>

05

SEGMENT 5 • 6:00 – 7:00

Closing & Readiness

Pressure-test your story — every member should be able to answer, not just the presenter.

A question to be ready for	✓ Strong answer	✗ Weak answer
"What stops a big company from just copying this?"	Your local moat: BM / dialect, Malaysian systems, the niche big players won't prioritise.	<i>'We're cheaper.' / 'We're more agile.'</i>
"What did each member contribute? Who built what?"	Decide who answers beforehand. Everyone owns a clear part — no one is just 'design support'.	<i>One person answering for the whole team.</i>
"If you had 3 more weeks, what would you improve first?"	One specific, high-impact improvement for your user. Shows product thinking.	<i>'We'd improve everything.'</i>
"Explain your app in one sentence — to a minister who's never heard of AI."	[App] helps [who] to [do what] without having to [old barrier]. Memorise it.	<i>Starting with 'So, our app uses Amazon Bedrock which...'</i>

KNOW THESE COLD

3 Things Every Member Must Be Able to Explain

Every single team member must know these cold — not just the presenter.

1

“Why does this need AI?”

Name specific capabilities a form or database cannot replace. Never use the words ‘powerful’ or ‘modern’.

2

“Who exactly is your user?”

One concrete persona with a name, an age, and a specific situation — not a broad category.

3

“Walk me through your AWS architecture.”

User → Lambda → Bedrock API (name the model) → response displayed. Every member, no notes.

DO THESE BEFORE 24 JUNE

Pre-Event Checklist

Tick every box as a team. If one is unchecked, that is exactly where your story will feel thin on stage.

☐

01

Every team member can answer the key questions about your project — not just one person.

☐

02

The app has been tested with 10+ unusual or unexpected inputs.

☐

03

One real Malaysian organisation identified as a potential pilot partner.

☐

04

A rough AWS cost per user, per month, has been calculated.

☐

05

Your user persona has a name, an age, and a concrete situation.

☐

06

‘Why AI?’ rehearsed with no use of ‘powerful’ or ‘modern’.

☐

07

Every member can explain the AWS architecture of the App without notes.

☐

08

A 15-second elevator pitch is memorised by all members.

You built something real.

Now show them why it matters.

Problem

Name your user. Own the pain point.

Demo

Show it live. Handle anything.

Impact

Name an org. Know the cost.
